It is with great pleasure I offer the following reference.

I have worked for 15 years as the projects manager for Nobles Pty Ltd, a quality ensured company to ISO9001, and operate a laboratory to National Association Testing Authority specifications. This ensures our customers that the products we produce are of flawless quality and our procedures and practices are independently audited to Australian and International standards regularly. Through my work I have come to appreciate genuine quality, and in particular attention to detail, a critical component of any quality assurance system. Accordingly it was a delight to find a car company with the same values.

After a good discussion with the team at Carmen I purchased a car unseen and had it shipped to me in another state, nothing in South Australia came close to the quality, low kms and price, it almost seemed too good to be true but through my professional dealings with the team at Carmen I literally ordered and paid for this car on line - something I thought I would never do, and what was promised was delivered.

The car is a pleasure to drive, at a great price, the process was painless and I was rewarded for showing faith in a company that promises a lot and delivers even more.

I would have no hesitation in buying from Carmen again and recommend anyone interested in a good low km's Japanese import car to have the utmost confidence that this company will source the best value for money vehicle in the market.

Regards,

Mark Dowley
Sales/Projects
A. Noble & Son Limited
